

Disco Ball

Every dance floor needs a disco ball! Make this one at home and hang it up before you dance the night away with Mom.

ACTIVITIES

MATERIALS

- aluminum foil
- styrofoam ball (optional)
- glue
- sequins or glitter
- string or thin wire
- scissors
- tape

STEP 1:

The inside of the disco ball needs to be light-weight so it doesn't fall! You can use a styrofoam ball, or crumple up foil into a tight sphere. If you use multiple pieces of foil, make sure to tape it up so it doesn't fall apart!

STEP 2:

Secure your wire or string to the ball. For string, wrap it around the center of the ball and tie a knot. For wire, wrap it around then twist the two ends together. To make sure they don't fall off, tape it down all the way round. Make sure you leave at least 20 inches to hang from!

STEP 3:

Cover the ball in a layer of aluminum foil, cutting off the excess if you need to. Make sure your string is still sticking out.

STEP 4:

The fun part! Attach your sequins one-by-one with tiny dots of glue. You can make a pattern with colors or do it randomly! If you're using glitter (or you just want to get the job done quickly), coat the ball with a layer of glue, then dip it in a bowl of glitter or sequins until it's covered.

STEP 5:

Let it dry, then hang it anywhere on your dance floor using tape or by tying it to something. Get the dance party started!
